PROFESSIONAL SUMMARY

Senior full-stack developer with over six years building fintech, commerce, and AI products. I build the release engineering layer for AI agents: release control planes, browser-based evaluation environments, task assertions, and LLM-as-judge review. I led front-end work for a 500+ merchant B2B platform and now build agent tooling for client environments. Strong in TypeScript, Next.js, Python, FastAPI, PostgreSQL, and GCP.

CORE COMPETENCIES

Full-Stack Engineering | AI Agent Platforms | Release and Deployment Automation | LLM Evaluation and Rubrics

React / Next.js / TypeScript | Python / FastAPI | PostgreSQL / pgvector | GCP / AWS / Docker / CI-CD

WORK EXPERIENCE

Turing

November 2024 – Present

Full-Stack Developer & AI Engineer

USA (Remote)

- Built the release control plane for an internal agent evaluation platform: GitHub repo registration, GCP Cloud Build, release branches and tags, Cloud Run deploys, and live build logs.
- Added redeploy and cancel controls, back-merge tracking, access walls, notifications, audit history, and release notes.
- Built task and prompt workflows, assertion-based state checks, rubric scoring, LLM-as-judge review, golden runs, and batch end-to-end runs.
- Worked across support desk, email, CRM, and sales environments, with client variants for NVIDIA, Amazon, Salesforce, and Microsoft.
- Kept runs reproducible with clean starting state and access scoped per environment.

Paismo

October 2023 – October 2024

Senior Software Developer

USA (Remote)

- Built an HR and payroll management platform combining People Directory, Time & Attendance, Scheduler, Goals & Performance, Leave Management, Payroll, and Recruitment into one platform.
- Connected core payroll processing, tax filing automation, employee self-service portal, and benefits administration.
- Processed payroll for 200+ employees with 99.9% accuracy and reduced month-end close time from 5 days to 1 day.

Kepler Lab

October 2022 – September 2023

Software Developer

South Korea (Remote)

- Led front-end architecture for DreamBience, an AI meditation web app that builds personalized guided sessions from three user keywords, using Next.js 13+, React 18, and TailwindCSS.
- Connected OpenAI APIs and AWS Lambda for generated meditation sessions, and cut render time by 40%.

Kifiya Financial Technology

October 2021 – September 2022

Full-Stack Developer

Addis Ababa, Ethiopia

- Built a B2B commerce platform serving 500+ retailers and merchants with Next.js, TypeScript, Redux, TailwindCSS, Node.js, PostgreSQL, and AWS.
- Cut page load times by 30% and raised merchant adoption by 25% through a modular front end, server rendering, and real-time data sync.
- Connected the front end to Node.js and PostgreSQL APIs, and automated AWS releases, cutting release cycles by 50%.

JaktTech Engineering

October 2020 – September 2021

Lead Front-End Developer

Addis Ababa, Ethiopia

- Built enterprise web apps for banks and insurance companies, improving internal operations by 30%.
- Developed an SMS gateway management system used across multiple organizations.

2F Capital

March 2019 – September 2020

Front-End Developer

Addis Ababa, Ethiopia

- Built a taxi platform with 100,000+ users and 50,000+ transactions, including an admin view for 42,000+ driver records.
- Worked on Sewasew, an Ethiopian music streaming web app, building subscription management and the web listening experience.

PROJECTS

Vector Search Studio

pgvector-backed semantic search demo with HNSW indexing, cosine distance, a React and TypeScript UI, tests, and CI. Handles typo-tolerant retrieval over Supabase documentation.

PostgreSQL · pgvector · HNSW · React · TypeScript · CI

EDUCATION

Bachelor's Degree in Computer Science and Engineering Adama Science and Technology University 2020

SKILLS

Languages: TypeScript, JavaScript, Python

Front end: React, Next.js (App Router, React Server Components), Redux, TailwindCSS

Backend: Node.js, Express, FastAPI, REST APIs, WebSockets **Data:** PostgreSQL, pgvector, Prisma, SQLModel, MongoDB

Cloud and delivery: GCP Cloud Build, Cloud Run, AWS (EC2, S3, Lambda), Docker, GitHub Actions, CI/CD

AI: LLM agent tool use, RAG, pgvector retrieval, prompt and workflow design, task assertions, rubric design, LLM-as-judge review, OpenAI API

Front-end quality: Playwright, server rendering, technical SEO, Core Web Vitals
