Engida Lishan

FULL-STACK DEVELOPER & AI ENGINEER

engida32lishan@gmail.com | linkedin.com/in/engida | Addis Ababa, Ethiopia

PROFESSIONAL SUMMARY

Full-Stack Developer and AI Agent Engineer with five years of experience designing scalable web applications and autonomous agent platforms. Proven expertise in building high-performance architectures using Next.js, FastAPI, Python, and PostgreSQL with pgvector. Specialized in developing multi-step RAG pipelines, fine-tuning LLMs, and deploying cloud-native AI solutions.

CORE COMPETENCIES

Full-Stack Development (Next.js / React) | AI Agent Engineering | RAG Pipelines & pgvector | Python & FastAPI | LLM Fine-Tuning | Strapi Headless CMS | AWS & Docker CI/CD | Technical SEO & Core Web Vitals

WORK EXPERIENCE

Turing (Remote)

November 2024 - September 2026

Full-Stack Developer & AI Engineer

- Engineered an end-to-end autonomous agent platform and AI-powered web applications for global clients using Next.js, TypeScript, and FastAPI to deliver responsive real-time dashboards and automated workflows.
- Integrated pgvector within PostgreSQL databases to provide scalable semantic search and long-term memory via Retrieval-Augmented Generation pipelines.
- Developed custom specialized tools and API interfaces enabling agents to execute complex multi-step SaaS tasks using ReAct reasoning with strict schema validation.
- Implemented multi-stage task verification loops with critic models and Human-in-the-Loop mechanisms alongside fine-tuning for domain-specific LLM accuracy.
- Deployed scalable cloud architectures and microservices utilizing AWS, Docker, and edge caching strategies.

Kifiya Financial Technology

August 2023 - November 2024

Senior Front-End Developer

Addis Ababa, Ethiopia

- Led front-end development for a B2B e-commerce platform serving **500+ retailers and merchants**, built with Next.js 14, TypeScript, Redux, and TailwindCSS.
- Architected a modular, high-performance system, reducing load times by **30%** and boosting merchant adoption by **25%**.
- Implemented real-time synchronization and optimized SSR using Next.js App Router and React Server Components.
- Integrated front-end with Node.js + PostgreSQL backend APIs for low-latency data access.
- Automated AWS CI/CD pipelines, cutting release cycles by **50%**.

Kepler Lab

January 2023 - December 2023

Software Developer

South Korea (Remote)

- Led front-end architecture for an AI-driven sound processing web app using Next.js 13+, React 18, and TailwindCSS.
- Integrated OpenAI APIs and AWS Lambda for real-time audio analysis and inference.
- Built a live preview and hot-reload development system, enabling rapid iteration and error isolation.
- Optimized performance and caching for a **40% faster render time**.
- Collaborated with distributed AI teams to ensure scalable front-end systems.

JaktTech Engineering

September 2022 - November 2023

Lead Front-End Developer

Addis Ababa, Ethiopia

- Built enterprise web apps for banks and insurance companies, improving internal operations by **30%**.
- Developed an SMS gateway management system used across multiple organizations.
- Advocated modular design and front-end code reuse for long-term scalability.

2F Capital

March 2021 - September 2022

Front-End Developer

Addis Ababa, Ethiopia

- Built and maintained a taxi-hailing app with **100,000+ users** and **10,000+ drivers**, processing **50,000+ transactions**.
- Developed Sewasew, an Ethiopian music streaming platform, enhancing engagement and retention.
- Collaborated with backend teams to ensure seamless API integrations and optimized UI performance.

UpScale

March 2019 - January 2021

Full-Stack Developer

Addis Ababa, Ethiopia

- Created a school management web app that improved student engagement by **30%**.
- Developed an admin dashboard and landing page for Adama FC, boosting fan engagement by **40%**.

PROJECTS

Real Estate Web Application

Built a real estate web application with Strapi as the headless content backend.

Modelled property content in Strapi content types; the front end reads from the Strapi API at request time, so listings publish without a front-end release.

Implemented roles and permissions so agents manage only their own listings.

Built custom and computed fields for price display and availability; wired publishing to invalidate cached front-end pages instead of waiting on a rebuild.

Strapi (headless CMS)

Quant Trading System for Prediction Markets

Personal side project

Pulls live market data from prediction markets, runs signals over it, and automates execution.

Works directly with live order and position state, transaction lifecycle and status, and the failure modes of automated execution against a live book.

EDUCATION

Bachelor's Degree in Computer Science and Engineering Adama Science and Technology University 2020

SKILLS

Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Node.js, Express

Styling & Tools: TailwindCSS, Redux, React Query, Apollo GraphQL **Databases:** MongoDB, PostgreSQL, Prisma, Mongoose

CMS & Content: Strapi (headless CMS, content-type modelling, custom fields, roles & permissions)

SEO & Performance: Technical SEO in Next.js/React, server-side rendering, App Router / React Server Components, metadata, Core Web Vitals, performance optimization

Crypto & Trading (working knowledge): Prediction markets, exchange and market-data integrations, wallet and custody models, transaction lifecycle and status flows, deposits/withdrawals, balances

DevOps & Cloud: AWS (EC2, S3, Lambda), Docker, CI/CD Pipelines

Other: REST APIs, WebSockets, Performance Optimization, AI API Integration

AI & Machine Learning: Python, LangChain, PyTorch, Hugging Face, Vector Databases (Pinecone/Milvus)
